The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I). (I) is useful for: inhibiting cancer processgulant protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large

Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.

associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characteriaing sites of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polymucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 oligonucleotide probes are useful for in vivo diagnosis. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic peptide of human cystatin-8 (Zcys8)
                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I). (I) is useful for: inhibiting cancer procoagulant protein in an individual and thus inhibiting the thrombotic events
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cystatin-8; Zcys8; cancer; procoagulant protein; thrombosis; spermatogenesis; seminal fluid viscosity; cryopreserved sper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human cystatin-8 (Zcys8) antigenic fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAU79864;

                 The invention describes an isolated mammalian cystatin-8 (Zcys8)

CC polypeptide (I). (I) is useful for: inhibiting cancer procoagulant

CC protein in an individual and thus inhibiting the thrombotic events

CC associated with cancer; promoting spermatogenesis, modulating seminal

CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm

CC motility and fertilisation; and as antigenic peptides to generate

CC antibodies Zcys8 is useful as research reagent for characterising sites

CC of interaction between Zcys8 and its receptor. Zcys8 is useful in

CC enhancing fertilisation during assisted reproduction in humans and in

CC animals. Anti-(I) antibodies are useful to screen biological samples like

CC presence of Zcys8. The antibodies are also useful to isolate large

CC quantities of Zcys8 protein and MA sequences that encode Zcys8 genes.

CC The polymucleotide encoding (I) is useful to detect and to localise the

CC expression of a Zcys8 gene in a biological sample and Zcys8

CC polymucleotide probes are useful for in vivo diagnosis. The

CC copy number changes, insertions in the Zcys8 gene like ancuploidy, gene

CC copy number changes, insertions, delections, restriction site changes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     អន្តិ និង្ស

                            CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm contility and fertilisation; and as antigenic peptides to generate cantibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in cenhancing fertilisation during assisted reproduction in humans and in cenhancing fertilisation during assisted reproduction in humans and in cenhancing fertilisation during assisted reproduction in humans and in cenhancing fertilisation during assisted reproduction in humans and in cenhancing fertilisation during assisted reproduction in humans and in cenhancing trine, saliva, tissue biopsy and autopsy material in vitro for the conservation of Zcys8. The antibodies are also useful to isolate large quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes.

CC The polymucleotide encoding (I) is useful to detect and to localise the colymucleotide probes are useful for in vivo diagnosis. The colymucleotide probes are useful for in vivo diagnosis. The colymucleotide probes are useful for in vivo diagnosis. The colymucleotide probes are useful for in vivo diagnosis. The colymucleotide probes are useful for in vivo diagnosis. The colymucleotide probes are useful for in vivo diagnosis and rearrangements and genetic alterations, deletions, restriction site changes and carrangements and genetic alterations that inactivate the Zcys8 gene.

CC This sequence represents an antigenic peptide of human cystatin-8 (Zcys8)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              믕
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ೧ೱಜ

                                                                                                            CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm cc motility and fertilisation; and as antigenic peptides to generate cc antibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in cc enhancing fertilisation during assisted reproduction in humans and in cc enhancing fertilisation during assisted reproduction in humans and in cc enhancing fertilisation during assisted reproduction in humans and in cc presence of Zcys8. The antibodies are useful to screen biological samples like cc presence of Zcys8. The antibodies are also useful to isolate large cu partities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polymucleotide encoding (I) is useful to detect and to localise the cc polymucleotide probes are useful for in vivo diagnosis. The cliponucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and creaters and genetic alterations that insertions the Zcys8 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                      of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8 protein and DNA sequences that encode Zcys8 genes antibodies are also useful to isolate large quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 gene oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic fragment of human cystatin-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                              fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cystatin-8; Zcys8; cancer; procoagulant protein; thrombosis; spermatogenesis; seminal fluid viscosity; cryopreserved sper sperm motility; fertilisation; antigenic fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide (I). (I) is useful for: inhibiting cancer procoagulant protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal

                                                                   CC associated with cancer; promoting spermatogenesis, modulating seminal Cf fluid viscosity, enhancing viability of cryopreserved sperm, sperm CC motility and fertilisation; and as antigenic peptides to generate CC antibodies. Zcys8 is useful as research reagent for characterising sites CC of interaction between Zcys8 and its receptor. Zcys8 is useful in CC enhancing fertilisation during assisted reproduction in humans and in CC animals. Anti-(I) antibodies are useful to screen biological samples like Diood, urine, saliva, tissue biopsy and autopsy material in vitro for the CC plood, urine, saliva, tissue biopsy and autopsy material in vitro for the CC presence of Zcys8. The antibodies are also useful to isolate large CC quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 coligonucleotide probes are useful for in vivo diagnosis. The CC polynucleotide encoding (I) is useful in determining whether a subject's CC chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene CC copy number changes, insertions, deletions, restriction site changes and crearrangements and genetic alterations that inactivate the Zcys8 gene. This is the amino acid sequence of human cystatin-8 (Zcys8)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polymucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 oligonucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene and contain a mutation in the Zcys8 gene like aneuploidy, gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic peptide of human cystatin-8 (Zcys8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I). (I) is useful for: inhibiting cancer procoagulant protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.

                                                                                                                                                           The invention describes an isolated mammalian cystatin-8 (Zcys8)
CC polypeptide (I) (I) is useful for: inhibiting cancer procoagulant
CC protein in an individual and thus inhibiting the thrombotic events
CC associated with cancer; promoting spermatogenesis, modulating seminal
CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm
CC motility and fertilisation; and as antigenic peptides to generate
CC antibodies. Zcys8 is useful as research reagent for characterising sites
CC of interaction between Zcys8 and its receptor. Zcys8 is useful in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC entraction of zcys8 protein and DNA sequences that encode zcys8 genes.
CC plantities of Zcys8 protein and DNA sequences that encode zcys8 genes.
CC The polymucleotide encoding (I) is useful to detect and to localise the
CC polymucleotide probes are useful for in vivo diagnosis. The
CC polymucleotide probes are useful for in vivo diagnosis.
CC polymucleotide probes are useful for in vivo diagnosis.
CC copy number changes, insertions, deletions, restriction site changes and
CC copy number changes, insertions deletions, restriction site changes and
CC rarrangements and genetic alterations that inactivate the Zcys8 gene.
CC This sequence represents an antigenic peptide of human cystatin-8 (Zcys8)
                                                                                            Query Match

                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                   CC polypetide (1). (1) is useful for: inhibiting cancer procedulant CC protein in an individual and thus inhibiting cancer procedulant CC associated with cancer; promoting spermatogenesis, modulating seminal CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm CC motility and fertilisation; and as antigenic peptides to generate CC antibodies. Zcy88 is useful as research reagent for characterising sites CC of interaction between Zcy88 and its receptor. Zcy88 is useful in CC enhancing fertilisation during assisted reproduction in humans and in CC animals. Anti-(1) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcy88. The antibodies are also useful to isolate large CC quantities of Zcy88 protein and DNA sequences that encode Zcy88 genes. CC The polymucleotide encoding (1) is useful to detect and to localise the expression of a Zcy88 gene in a biological sample and Zcy88 genes. CC copy number changes are useful for in vivo diagnosis. The CC copy number changes, insertions, deletions, restriction site changes and carrangements and genetic alterations that inactivate the Zcy88 gene. CC This sequence represents an antigenic peptide of human cystatin-8 (Zcy88)
                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                 á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes an isolated mammalian cystatin-8 (Zcys8)

CC polypeptide (I). (I) is useful for: inhibiting cancer procoagulant

CC protein in an individual and thus inhibiting the thrombotic events

CC associated with cancer; promoting spermatogenesis, modulating seminal

CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm

CC motility and fertilisation; and as antigenic peptides to generate

CC antibodies. Zcys8 is useful as research reagent for characterising sites

CC of interaction between Zcys8 and its receptor. Zcys8 is useful in

CC enhancing fertilisation during assisted reproduction in humans and in

CC enhancing fertilisation during assisted reproduction in humans and in

CC enhancing fertilisation during assisted reproduction in humans and in

CC entancing fertilisation during assisted reproduction in humans and in

CC entancing fertilisation during assisted reproduction in humans and in

CC entancing fertilisation during assisted reproduction in humans and in

CC quantities of Zcys8. The antibodies are useful to screen biological samples like

CC presence of Zcys8. The antibodies are also useful to isolate large

CC expression of a Zcys8 gene in a biological sample and Zcys8 genes.

CC oligonucleotide probes are useful for in vivo diagnosis. The

CC polynucleotide encoding (I) is useful to detect and Zcys8.

CC polynucleotide encoding (I) is useful in determining whether a subject's

CC polynucleotide encoding (I) is useful to servation site changes and

CC rearrangements and genetic alterations that incarcivate the Zcys8 gene

CC rearrangements and genetic alterations entitle of human cyclations.

                                                                                                                                                                                                                                                                                                                                                                                                                                               cc kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal content to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially content to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more collaboration to polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:
                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                       polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14-AUG-2001; 2001US-0312147P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to cystatin T (also known as zcys3) DNA and protein sequences. Cystatin T is testis specific and is homologous to cystatin-related epididymal specific gene (CRES) and type 2 cystatins. Cystatins inhibit cysteine proteinases and are found with male reproductive tissues and secretions. Cystatin T sequence is useful for modulating spermatogenesis and studying, diagnosing and treating reproductive disorders. The present sequence is murine cystatin-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Murine, cystatin T; zcys3; cystatin-related epididymal specific protein; CRES; inhibitor; cysteine proteinase; male reproductive tissue; testis; spermatogenesis; therapy; reproductive disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cystatin T polypeptides are useful for modulating spermatogenesis studying, diagnosing and treating reproductive disorders.

                                                                                                                                                                                                                                                                            protein which is homologous to mouse testis specific cystatin T (also known as zoya). The cystatin T polynucleotide is useful in gene therapy applications, where it is desired to increase or inhibit cystatin T activity. It is also useful for producing cystatin T polypeptide, as well as for detecting the expression of a cystatin T gene in a biological sample. The cystatin T is useful for modulating spermatogenesis, and may be used to study or modulate that function in in vitro or in vivo systems. In particular, it is also useful for enhancing sperm production, increasing the number of viable sperm in a sample, or enhancing

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: ZymoGenetics, Inc.

TITLE OF INVENTION: Mammalian Cystatin-8 and Its Use to

TITLE OF INVENTION: Inhibit Cancer Procoagulant Protein

FILS REFERENCE: 00-81PC

CURRENT APPLICATION NUMBER: US/09/941,314

CURRENT FILING DATE: 2001-08-29

PRIOR APPLICATION NUMBER: 60/230,230

PRIOR FILING DATE: 2001-09-01

NUMBER OF SEQ ID NOS: 19

SOPTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 12

LENGTH: 33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-941-314-12

GENERAL INFORMATION

```
Sequence 10, Application US/09941314

Patent No. US20020142396A1

GENERAL INPORMATION:
APPLICANT: ZymoGenetics, Inc.
TITLE OF INVENTION: Mammallan Cystatin-8 and Its Use to TITLE OF INVENTION: Inhibit Cancer Procoagulant Protein FILE REFERENCE: 00-81PC
CURRENT APPLICATION UNMBER: US/09/941,314
CURRENT FILING DATE: 2001-08-29
PRIOR APPLICATION NUMBER: 60/230,230
PRIOR APPLICATION NUMBER: 60/230,230
PRIOR FILING DATE: 2001-09-01
NUMBER OF SEQ ID NOS: 19
SOFTMARE: FastSEQ for Windows Version 4.0

SEQ ID NO 10

                                                                                                                                                                                                                                                                                                                                                Sequence 17, Application US/09941314
Patent No. US20020142396A1
GENERAL INFORMATION:
APPLICANT: ZymoGenetics, Inc.
TITLE OF INVENTION: Mammalian Cystatin-8 and Its Use to
TITLE OF INVENTION: Inhibit Cancer Procoagulant Protein
FILE REFERENCE: 00-81PC
